

Fabricating Australia's Future

Ferretti International is a well-resourced, diversified engineering and fabrication company with an enviable track record of completing major industrial projects in the defence, energy, oil and gas and infrastructure sectors mainly in South Australia.

With an experienced and flexible workforce Ferretti can quickly respond to and support client's needs safely, on-time and to the desired quality.

We provide Steel Fabrication Services, Specialist Pipe Welding Services, Pipe Bending, Site Maintenance, Site Installation Services, Specialist labour hire and Project Management.

Ferretti International is part of the AARTEE Group, an international business focussed on:

- Steel Manufacturing
- Steel Distribution, Processing and Warehousing
- Metal / Steel Trading
- Industrial Engineering and Construction

Services for industry

We provide steel fabrication services, specialist pipe welding services, pipe bending, site maintenance, site installation services, specialist labour hire and project management.

The Mining Industry

Ferretti International is a leading fabrication and construction provider. Our core business consists of pipe spool fabrication, vessel/tank manufacture and much more.

The Water Industry

Water Industry experience includes irrigation and pump station installations and upgrades and large MSCL mainswater pipe fabrication and installation.

The Petroleum Industry

We provide specialist services to the petrochemical industry with a strong presence in the Cooper Basin.

The Defence Industry

Ferretti International has a key Capability within the Defence Industry including block building, plate work, pipework, pipe bending and pulling, exotic pipe material welding such as copper nickel pipe, site labour hire and installation services.

The Wine Industry

Ferretti International provides site piping installation in Stainless and carbon steels, copper, poly and other piping materials and much more.

Capabilities

- Mechanical Plant Installation
- Mechanical Plant Relocation
- Modular Skids Manufacture
- Vessel/Tank Manufacture
- Pipe Spooling & Construction
- Complex Pipe Spooling
- Ferrous & Non-Ferrous Welding
- Pump Station Upgrades
- Structural Steel Erection
- Remote On-Site Plant Installation
- On-Site Pipe Welding & Installation
- Ducting Installation
- High Pressure Gas Pipeline Installation
- Shutdown Maintenance
- Infrastructure Projects
- Engineering & Project Management
- Block Building
- Specialist Labour Hire
- Defence Industry Pipework Installation

Our Projects

We have an enviable reputation of completing major industrial projects across a number of different sectors, including defence, energy, oil, gas and infrastructure.

Take a look at an overview of some of our recently completed projects

Maritime Construction – Whyalla Jetty

Ferretti International scope included the surface treatment of the steel piles, workshop fabrication drawings, supply material, fabricate the structural steel, fabricate all balustrading, fabricate all shelters and surface treatment.

Heavy industry - Central Petroleum

Oily water tank and pipe spools fabrication

Ferretti was engaged by Central Petroleum to replace the oily water tank and the piping on the skid.

Ferretti International scope was to supply all material, fabricate the tank, skid and piping.

The tanks and piping were painted internally and externally, and then spark tested to suit the required standards.

GFG Alliance – LIBERTY Primary Steel

Ferretti International's scope of work was to fabricate 2 off Ladles which included the supply of material, rolling of the barrels, full assembly of the Ladle, NDT of the ladles and PWHT of the completed Ladles.

BHP

BHP SAF Piping

Ferretti International's scope was to supply the SAF material, fabricate spooling to BHP drawing, Hydro testing and clean the piping.

BHP Rubber Line Spool

Ferretti International's scope was to supply all material, fabricate spooling to BHP drawing, NDT, Hydro testing, rubber lining and surface treatment.

GLP Warming Skid

Ferretti International's scope of work was to:

- Supply of all structural materials (including structural fasteners) and labour to fabricate the base frames, including any platforms, ladders and handrails (where applicable)
- Supply of all piping materials as listed on the GLP isometric drawings. This scope shall include supply of gaskets and fasteners for the package.
- Fabrication of complete pipe spooling in accordance with GLP isometric drawings (after trial fitting). Piping fabrication shall be conducted in strict compliance with the nominated piping code and specifications.
- Trial install free issued equipment onto skid base, install all piping as welded trial assembly, trial assemble all structural pipe supports.
- Disassembly of all skid components prior to surface treatment.
- Surface treatment of structural steel components.
- Full assembly of skid including installation of vessels, pipe spools and structural steel.

Our Facilities

- Ferretti International's head office workshop is located at Wingfield near Port Adelaide in South Australia with a full fabrication workshop located in Whyalla.
- The facility specialises in piping fabrication for the Oil and Gas and Water industries plus the fabrication of pressure vessels, stacks and miscellaneous structural steel. Personnel are experienced in the fabrication of both ferrous and non-ferrous fabrication materials including Stainless Steel, Duplex and Super Duplex for the process and water industries.
- The facility has an extensive range of plant and equipment including pipe bending, T-drill and rolling machinery plus submerged arc welding process for heavy walled vessels. The two workshops enable concurrent fabrication of different materials such as carbon and stainless steel without risk of contamination.
- Ferretti International has an experienced workforce of both locally trained employees and experienced tradesmen from overseas. Ferretti International maintains a strong emphasis on skills development with part of our fabrication facility used for in house welder training and our trades apprenticeship training.
- To add value to our workshop capabilities and project management staff, we have an extensive range of equipment and facilities available to service the site component of projects.
- Ranging from the transportation for goods and personnel, mobile plant equipment and tools, site offices/workshops and remote accommodation, equipment and storage containers to earthmoving equipment, etc. For project needs and to supplement our own fleet we often use hired equipment to fulfil the project requirements.
